

Accessible Visual content management Non-linear content browsing and navigation

Experience image and video content

We deliver:

_Tools to detect shot boundaries, summarise videos, create video mosaics, extract representative key-frames and describe camera motion in video assets that enable non-linear video browsing and accessible navigation

_Services to extract automatically metadata, add captioning, attach keywords and annotations to visual assets for making your image and video content accessible

_Automatic tools for indexing visual content based on IN2's beyond the state-of-the-art award winning content-based image analysis

_Advanced retrieval capabilities based on fast visual search techniques that are able to query 1M visual assets in less than 0.05 sec

_Methods to automatically recognise objects, classify and describe scenes and interpret object motion

_Complete system solutions for your image and video assets accessibility
